EXACT

Reference Number: EXACT_000011

Scheme: UCAS Undergraduate Scheme

Client Name: UCAS

Statistics Requested: Number of Acceptances, Mean achieved A level points score for Acceptances

Summary: Breakdown of Subject Group (Summary Level), Applicant Domicile (UK and global regions) filtered to 18 year old applicants domiciled in the UK (excluding Scotland) achieving at least 3 A levels at End of Cycle.

Years: 2014 - 2018. Year is defined as cycle year, when the application was processed, rather than entry year.

Cycle Reference Point: End of Cycle.

Technical notes and definitions

Applicant Domicile (High Level)

Applicant's area of permanent residence summarised at a high level. This variable is derived from domicile as declared by the applicant and does not guarantee fee status. Split by the following values: 'England', 'Northern Ireland', 'Scotland', 'Wales', 'EU (excluding UK)' and 'Not EU'. Please note: The Channel Islands and the Isle of Man have been assigned as 'Not EU'.

Applicant Domicile (UK and global regions)

Applicant's area of permanent residence summarised to UK and global regions. This variable is derived from domicile as declared by the applicant. Split by the following values if domiciled in the UK: 'North East', 'Yorkshire and The Humber', 'North West', 'East Midlands', 'West Midlands', 'East of England', 'London', 'South East', 'South West', 'Wales', 'Northern Ireland', 'Scotland'. Split by the following regions if Non UK: 'Africa', 'Americas', 'Australasia', 'Europe', 'Asia'. Please note: The Channel Islands and the Isle of Man are assigned as 'Europe'.

Subject Group (Summary Level)

Classifies courses into a summary level of 26 subjects. Each course is assigned up to three valid JACS3 subject codes (e.g. G100 – Mathematics) and a course balance indicator by UCAS, which are available for review by the provider. The course is assigned a subject based on these JACS3 subject codes and balance indicator, it largely correlates to the first two characters of the subject codes. Where there are more than one JACS3 subject codes for a given course, and the balance indicator is dual or triple, the first two characters of each subject code are reported in combination to a relevant category (e.g. Course with dual balance indicator with JACS3 subject codes B940 = Counselling and C843= Counselling psychology is assigned a subject 'Y Combined sciences'). Please note: Between 2007 and 2011 the subject codes assigned to each course were from the JACS2.0 classification, therefore JACS3 versions of the subject categories have been approximated for 2007 to 2011 to allow a consistent time series.

Achieved A level grade profile

The highest 3 A level grades achieved by the applicant as identified either on application or through awarding body linkage process. ABL grades are verified through the awarding bodies for qualifications achieved during the application cycle. Application, i.e. self-declared, grades are considered for any qualifications achieved prior to the academic year in which the application was made, these are then topped-up with ABL grades if there are less than 3 grades declared. The application and ABL grade profiles are then converted to points and compared. The grade profile corresponding to highest overall points score is then used. A level Double Award grades are included, AS Level grades are not included. The profile represents the qualifications recorded as held by the applicant at the end of the cycle to which the statistic relates. This variable is currently only available for 18 year-old applicants domiciled in England, Northern Ireland and Wales, any applicants outside of this cohort will be assigned the value 'Not applicable'.

Number of Acceptances

Acceptance is defined as an applicant who has been placed for entry into higher education. RPAs are included in the total. An RPA (record of prior acceptance) is an application submitted to UCAS by an institution when an unconditional firm has already been offered and accepted by the applicant.

Mean achieved A level points score for Acceptances

The value obtained by dividing the sum of achieved A level points scores* by the Number of Acceptances**. Values displayed are rounded to one decimal place. Some cells may be subject to disclosure controls, with values displayed as 'N/A' (see Disclosure Controls notes below). *A points score attached to the highest 3 A level grades achieved by the applicant as identified either on application or through awarding body linkage process. The following points per grade are used in the calculation: A* = 6, A = 5, B = 4, C = 3, D = 2, E = 1. A level Double Award grades are included, AS Level grades are not included. The score represents the qualifications recorded as held by the applicant at the end of the cycle to which the statistic relates. Scores for 18 year-old applicants domiciled in England, Northern Ireland and Wales are considered only. These scores are calculated purely for analytical purposes and do not relate to the UCAS tariff. **Acceptance is defined as an applicant who has been placed for entry into higher education. RPAs are included in the total. An RPA (record of prior acceptance) is an application submitted to UCAS by an institution when an unconditional firm has already been offered and accepted by the applicant.

Mean achieved A level points score for Acceptances - Number of records

The number of records contributing to the Mean achieved A level points score for Acceptances calculation. Please note these counts are included in the csv outputs only, and not in this document.

Disclosure Controls

Disclosure controls have been applied to the data to reduce the risk of disclosing personal data about identifiable individuals.

For counts, the controls include reporting each cell count to the nearest five. In particular cell counts of 1 and 2 are reported as 0. Rows that only report 0 are omitted from the output. These controls are applied to each cell independently so this may result in instances where totals do not equal the sum of the components.

For derived statistics (e.g. means), to ensure these disclosure controls are not undone, a minor adjustment is applied, if necessary, such that the set of records contributing to each cell matches the reported cell count (to the nearest five). This involves either removing 1 or 2 records at random, or adding in 1 or 2 duplicates at random. If the number of values contributing to a cell is 1, 2 or 0 then it is displayed as 'N'. Rows that only report 'N' are omitted from the output.
