PUBLICATION REFERENCE: 11_237

Dear colleague

This compendium of data from the 2011 cycle builds on the first End of Cycle Report we published last year. It contains a new section of analytical data as well as detailed tables and charts showing applicant and acceptance data by domicile, institution country, age, gender, ethnicity, POLAR2 group (deprivation index), type of school or college, distance travelled, type of higher education institution and subject area. In many cases, we have included historical data for additional context. The analytical data are indexed on page 6 and the reference data on pages 22 and 23.

This End of Cycle report records a year of admissions which was, in many respects, very similar to 2010. We show that there was no evidence of any off-trend application rates as widely anticipated in the media as a result of the impending changes in HE funding and tuition fees for 2012.

UCAS remains committed to making its data available as widely as possible to support HEIs, applicants, schools and colleges, Government and policy makers. We provide applicant tracking data to all our member institutions, and to schools and colleges. We publish monthly application statistics throughout each admissions cycle as well as more comprehensive datasets (the Applications Digest) after key deadlines in January and June, and a large annual dataset at the end of each cycle. More information about these can be found at:

www.ucas.com/about_us/stat_services/datacalendar/

We welcome feedback on this publication and suggestions for how it could be improved in future years – please contact our Communications Team at communications@ucas.ac.uk if you have any queries.

Mary Curnock Cook
Chief Executive

Section 1: Analytical overview of the 2011 cycle

Analytical overview of the 2011 cycle

The statistics for the 2011 application cycle show some important similarities and differences compared to recent years. This overview of the 2011 application cycle builds on the core reference tables in section 2 of this document, with additional analysis highlighting key patterns.

Acceptance rates for some qualification groups higher now than in past five years	15
Outcomes for young people holding offers	16
No change in young offer-holders gaining entry to firm choice in 2011, slight fall in unplaced	17
Continuation of trend for an increasing proportion of young offer-holders entering through insurance and Clearing	17
Deferred applicants and acceptances by entry year	18
Substantial falls in deferred applicants and acceptances	18
UK- and EU-domiciled acceptances by entry cycle continue recent pattern of broadly flat acceptances	19
24,000 extra UK- and EU-domiciled students expected to have started in Autumn 2011	20

Applicants, acceptances and the shape of the admissions cycle

Little change in overall applicant and acceptance numbers

Figure i shows how the overall statistics for applicants and acceptances in the 2011 cycle are similar to those for 2010, with small increases of 0.4 per cent for applicants and 1.0 per cent for acceptances.

Figure ii shows these overall figures as a graph.

Recent cycles show notable year-on-year increases in applicants but this trend did not continue for the 2011 cycle. The increase in the number of acceptances is also small, but larger than the increase in the number of applicants, leading to a slight fall in the number of unplaced applicants.

Figure i: Applicants and acceptances for full-time undergraduate courses at UK higher education institutions (2010 and 2011 cycles)

	2010	2011	Difference (+/-)	% change 2010-2011

Figure ii: Applicants and acceptances

SOURCE: UCAS

Recent decline in overall acceptance rate arrested

With similar numbers of applicants and acceptances the overall acceptance rate (that is, the proportion of applicants who are accepted for entry in the cycle) remains at around 70 per cent.

The recent trend of sharply falling acceptance rates, and increasing numbers of unplaced applicants, has been arrested. However, the overall acceptance rate remains much lower than the 77-78 per cent recorded for the cycles between 2004 and 2008. The trend since 2004 is illustrated at figure iii.

Figure iii: Overall acceptance rate

SOURCE: UCAS

The shape of the 2011 cycle for UK and EU applicants is similar to 2010

Figure iv shows the progress of the 2011 cycle (solid lines) from when it started in September 2010 to the end of the cycle in November 2011 compared to the equivalent points in the 2010 cycle (dashed lines).

At each point all the UK and EU applicants in the scheme are divided into three mutually exclusive states:

- those who hold no offers for entry,
- those who hold an offer which has not yet been resolved, and
- those who have been accepted into higher education.

The timetable of the UCAS scheme is evident from shape of the graph. As applications are submitted in advance of the October and January deadlines the number of applicants in the cycle with no offers rises. As institutions make offers in large numbers after the January deadline, the number of applicants with offers increases. By the middle of July around 400,000 applicants are holding offers, around 100,000 are already accepted and just fewer than 150,000 have no offers. As examination results become known the number holding offers declines rapidly with an accompanying increase in those accepted.

With the dashed lines for the 2010 cycle being close to the solid lines of the 2011 cycle it is clear that overall progress of the two cycles is very similar, including – as we saw in the preceding analysis – the final numbers accepted and unplaced.

Figure iv: UK and EU applicant status through the 2010 and 2011 cycles

SOURCE: UCAS

Application rates

One measure of demand for higher education is how likely people are to apply for entry to higher education through UCAS. This can be measured through application rates – that is, the number of applicants from a group, divided by the population size of that group. It is important to consider application rates rather than just overall applicant numbers since the population size of some groups can change significantly from year to year.

Application rates higher for young than other age groups

Figure v shows the application rates for selected UK-domiciled age cohorts. Young people aged 18 or 19 are more likely to apply than other age groups. We estimate that 32 per cent of UK 18 year olds and 16 per cent of 19 year olds applied in the 2011 cycle, compared to two per cent of the 21 to 24 year old and around one per cent or less of the 25 to 29 year old groups.

Figure v: UK application rates by selected age group

SOURCE: UCAS

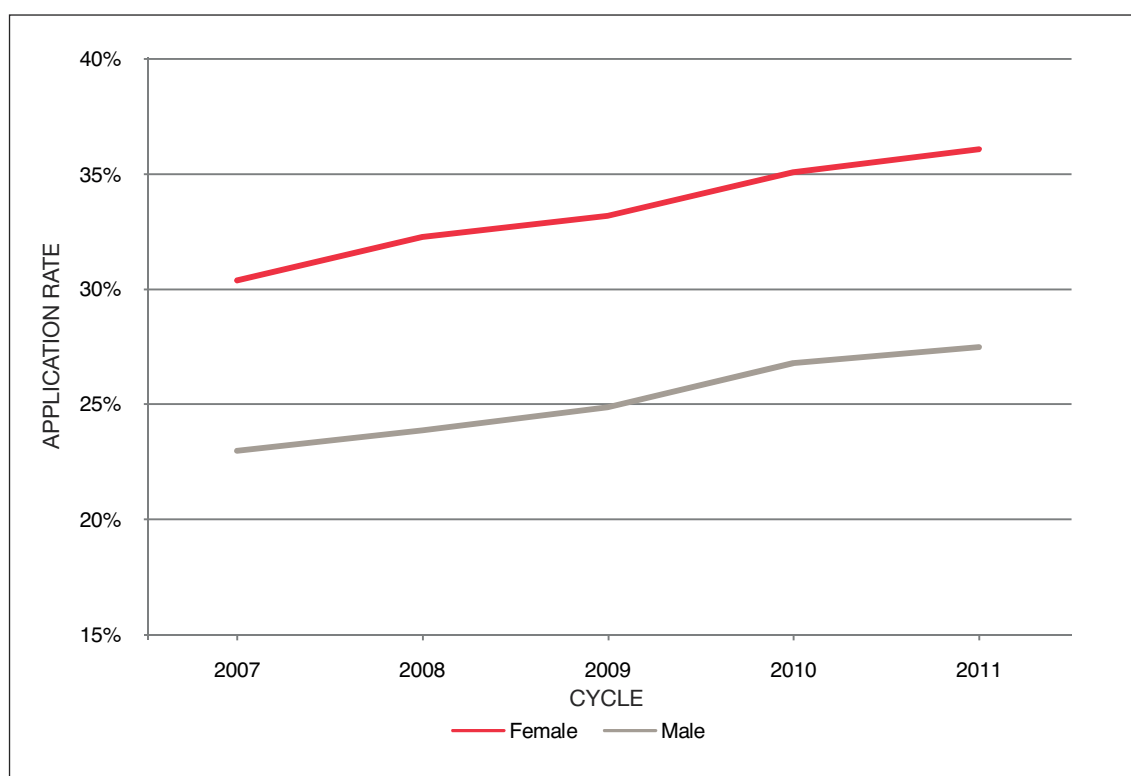

Application rates for young increasing broadly in line with recent trends

The proportion of 18 and 19 year olds applying to UCAS over recent cycles has been increasing at around one percentage point a year. The application rates for the 2011 cycle broadly continue that pattern. There is no above-trend increase in application rates for 18 or 19 year olds that would indicate that significant numbers were applying to UCAS a year earlier than expected.

Young women over 30 per cent more likely to apply than young men

Figure vi shows the UK 18 year old application rate by gender. The application rates for both men and women have increased, but the increase is larger for women. We estimate that 36 per cent of 18 year old women apply to UCAS compared to 27.5 per cent of 18 year old men. This makes young women just over 30 per cent more likely to apply than young men.

Figure vi: UK application rates for 18 year olds by gender

SOURCE: UCAS

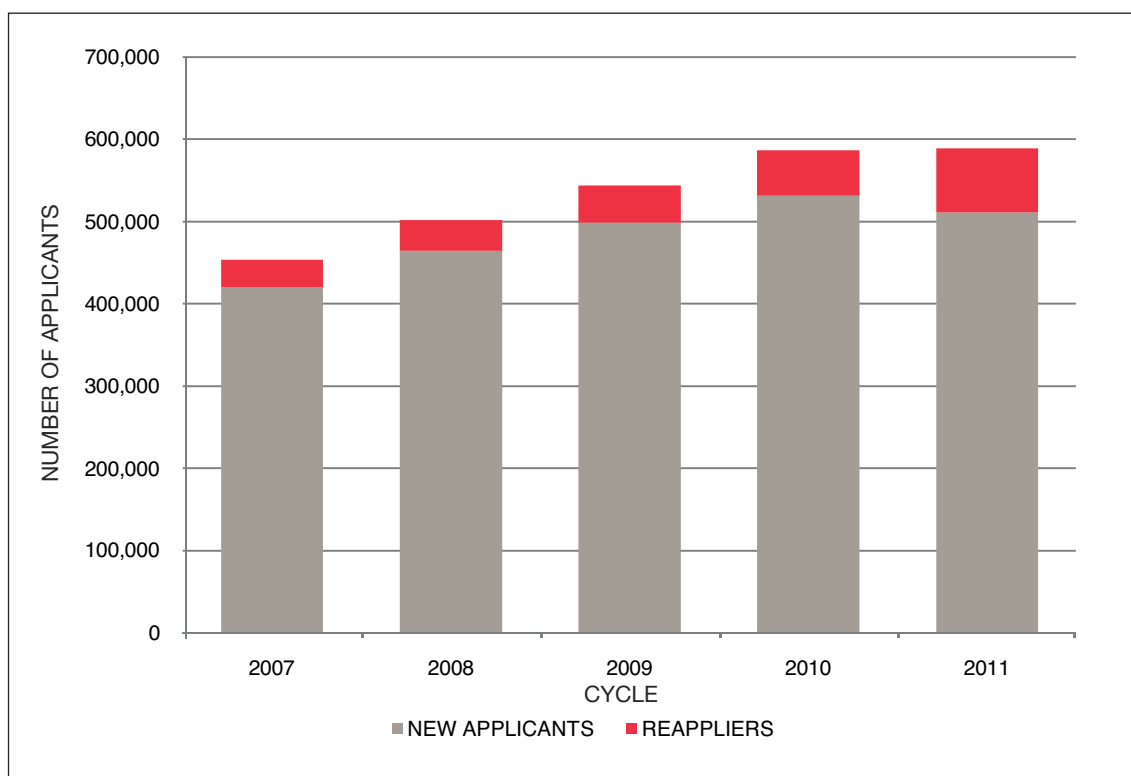

New applicants and reapplicants

Figure vii shows the trend in the number of UK-domiciled applicants with the proportion that are reapplicants (that is, they have applied to UCAS in the previous cycle) highlighted. The 2011 cycle shows a substantial increase in the number of reapplicants from 55,000 to 75,000. This follows the increase in unplaced applicants at the end of the 2010 cycle.

UK-domiciled new applicants declined for 2011 cycle

The grey sections of the bars in figure vii represent those UK-domiciled applicants who have not applied in the previous cycle – those that can be considered new or “first-time” applicants. The number of these UK domiciled first-time applicants decreased in the 2011 cycle by 20,000 (four per cent), the first fall in these numbers across the period looked at.

Figure vii: UK applicants split by whether they are “first-time” or have made a previous application

SOURCE: UCAS

First-time application rates decline for older age groups

Figure viii shows the trends in “first-time” application rates. This is similar to the analysis of application rates reported in figure v but here the application rate includes only those applying for the first time. The upward trend for 18 year olds is unchanged (since very few applicants in this age group will have had the opportunity to make a previous application). The trend for 19 year olds shows that the proportion of UK-domiciled 19 year olds making a first-time application to UCAS fell for the 2011 cycle. Similar falls in first-time application rates are seen for other older age groups.

Figure viii: UK new application rates by selected age group

SOURCE: UCAS

Acceptance rates

One measure of the difficulty of gaining entry to higher education is the acceptance rate (the proportion of applicants who get offered and who accept a place in higher education). Figure iii showed that overall the acceptance rate was similar for 2011 against 2010. However, comparing the overall acceptance rate does not take into account any changes in the composition of applicants that might affect the acceptance rate, such as their domicile, age or qualifications offered. To provide an indication of how the difficulty of gaining entry to higher education might be changing we looked at the trends in the acceptance rate for similar applicants through time.

Acceptance rate increases in 2011 for UK-domiciled 18 year olds after recent declines

Figure ix shows the trend in acceptance rates for UK-domiciled 18 year olds (yellow line). Using this group removes any effect on the trend from changing proportions of non-UK or older applicants within the overall acceptance rate figure. The acceptance rate for 18 year olds is higher than that for the applicants overall (at around 80 per cent compared to 70 per cent for the overall applicant cohort) but both show a fall in the acceptance rate across the 2009 and 2010 cycles. For 18 year olds the reversal of this trend in the 2011 cycle is more pronounced than for the overall figure. The acceptance rate increased by two percentage points for the 2011 cycle.

Figure ix: Acceptance rates for UK-domiciled 18 year olds attaining selected A-level grade combinations

SOURCE: UCAS

Acceptance rates for some qualification groups higher now than in past five years

Figure ix also shows the acceptance rates for 18 year old UK-domiciled applicants holding some common combination of A level grades, AAB and BBB (red and grey lines). Further subdividing the applicants in this way removes any distortion to the trend from applicants offering stronger or weaker qualifications through time.

These results show that these two groups have higher acceptance rates (around 90 per cent) and that they did not experience the reduction in acceptance rates in recent years to the same degree as other groups. In both cases there is a substantial increase in the acceptance rate in 2011 – in the case of AAB applicants taking the acceptance rate to 93 per cent, higher than at any other time in the period looked at.

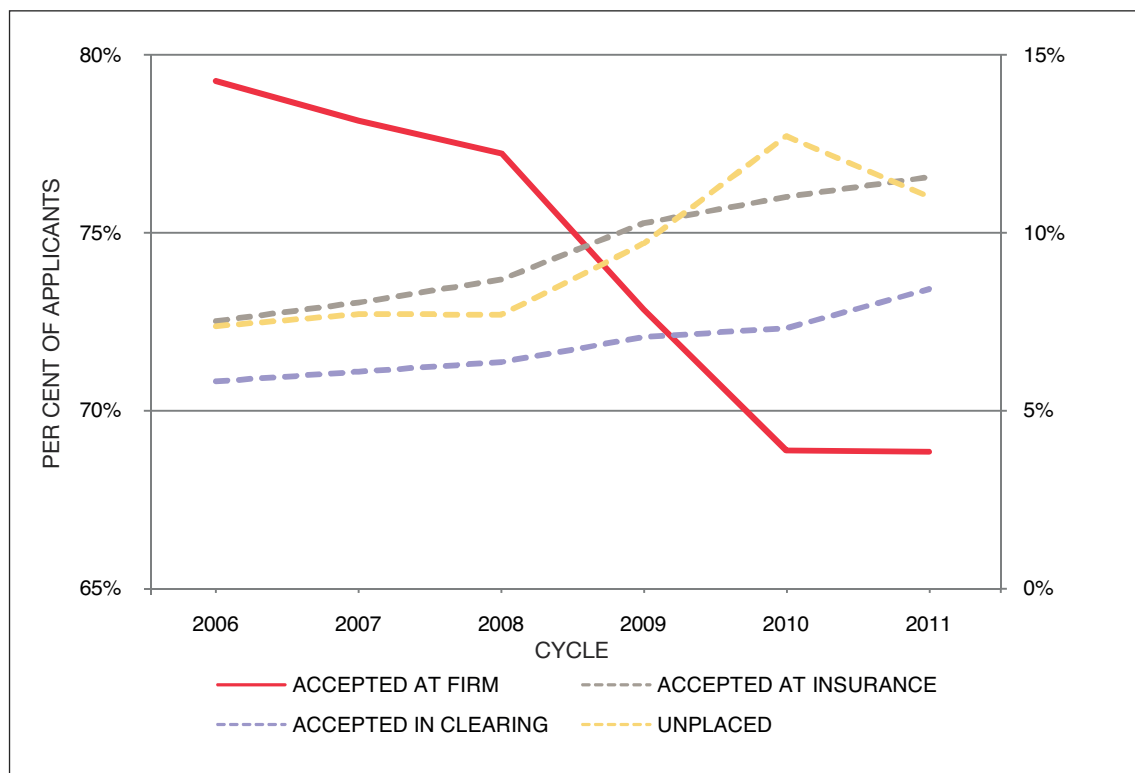

Outcomes for young people holding offers

Another indication of the difficulty of getting into higher education can be obtained by looking at whether people gain entry through their firm choice offers. If demand for places is high, then institutions might respond by applying tougher criteria in assessing whether an applicant has met the conditions of the offer. We would expect this to show up as fewer of those holding conditional firm offers gaining entry to their firm choice.

Figure x shows the outcomes for a subset of 18 year old applicants who were holding firm or insurance offers from institutions on the 30th June. For this age group, these offers are overwhelmingly conditional and most will be holding both a firm and an insurance offer.

Figure x: Outcomes for 18 year old UK applicants holding firm or insurance offers on 30th June

SOURCE: UCAS

Note: The dotted lines refer to the right hand side scale, the solid line relates to the left hand side scale

No change in young offer-holders gaining entry to firm choice in 2011, slight fall in unplaced

Of these applicants, 69 per cent gained entry at their firm choice. This is unchanged from the 2010 cycle but substantially lower than five years ago. The fall in the proportion of this group gaining entry to their firm choice was accompanied by an increase in the proportion ending up unplaced at the end of the cycle, reflecting the fall in the acceptance rate over this period. But the proportion of this group ending up unplaced fell slightly in the 2011 cycle to 11 per cent.

Continuation of trend for an increasing proportion of young offer-holders entering through insurance and Clearing

There have been increases in the proportion of this group gaining entry through their insurance choice (reaching 12 per cent in 2011) and through Clearing (reaching 8 per cent in 2011). There is no indication that the proportion gaining entry through their insurance choice increased beyond that which might be expected from the recent trend.

Deferred applicants and acceptances by entry year

The majority of applicants applying through UCAS are looking to start their HE course the following autumn; thus under “immediate entry”, individuals apply to start their course in autumn 2011 from the 2011 admissions cycle.

However, some institutions also allow applicants the opportunity to postpone the start of their course by a year; thus under “deferred entry”, individuals typically apply to start their course in autumn 2012 from the 2011 admissions cycle.

Substantial falls in deferred applicants and acceptances

Figure xi shows the trends in immediate and deferred UK-domiciled applicants and acceptances. The number of immediate applicants and acceptances is around ten times larger than the number of deferred applicants so they are shown on separate axes (immediate on the right).

Applicants for immediate entry increased in 2011, as did the number of acceptances for immediate entry. But applications for deferred entry fell by 22,000 in 2011 (a fall of over 40 per cent) and acceptances for deferred entry dropped by 16,000, a fall of more than half.

Figure xi: Trends in immediate and deferred applications and acceptances (UK-domiciled)

SOURCE: UCAS

UK- and EU-domiciled acceptances by entry cycle continue recent pattern of broadly flat acceptances

Figure xii shows the number of UK and EU acceptances over recent UCAS application cycles. The trend of year-on-year increases stopped in the 2010 cycle as a result of the imposition of forms of entrant number controls on UK and EU students – notably for English institutions – in that year. The figures for acceptances from the 2011 cycle show an increase, but of less than two per cent.

Figure xii: UK- and EU-domiciled acceptances by application cycle

SOURCE: UCAS

24,000 extra UK- and EU-domiciled students expected to have started in Autumn 2011

The trends in figure xii are based on the cycle in which an applicant was accepted. Figure xiii shows the same group of UK and EU acceptances but this time reported by the year in which they intend to start their courses. In particular deferred acceptances are counted against the year in which they intend to start, rather than the year in which they were accepted.

This shows that there has been a substantial increase (around 24,000, five per cent) in the number of UCAS acceptances that we would expect to start their courses in 2011. This increase is not evident in the trend by entry cycle as the increase in the number of immediate acceptances to 2011 is largely offset by the sharp decline in the number of deferred acceptances to 2012.

Institution grouping

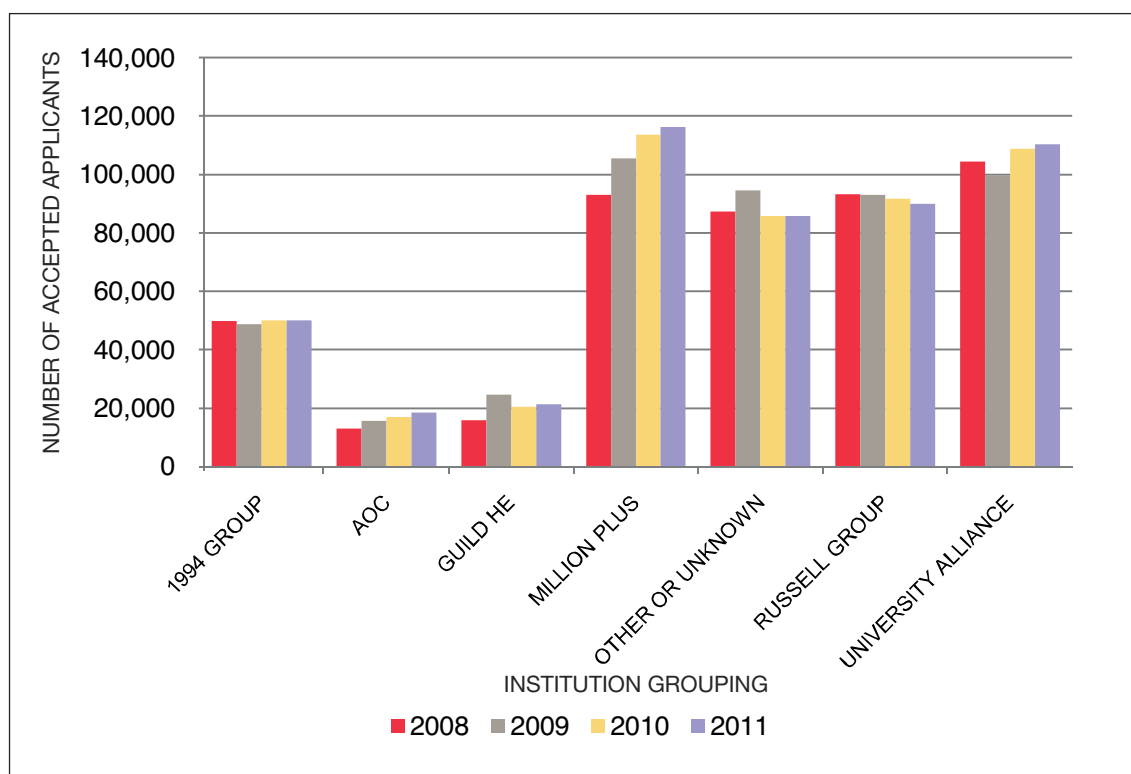

Many higher education institutions in the UK are part of groupings commonly known as 'mission groups'; more information can be found at <http://www.ucas.com/students/wheretostart/heexplained/universitygroups>.

Figure 13a: Acceptances by institution grouping (2008-2011)

POLAR2

The POLAR2 (Participation of Local AREas 2) classification groups small areas across the UK into five quintile groups according to their rate of young participation in higher education in the early 2000s. In quintile 1 fewer than one in five young people enter higher education compared to well over half in quintile 5. Each quintile represents around 20 per cent of the young population. Further information on the POLAR2 classification can be found on the HEFCE website (www.hefce.ac.uk/widen/polar/polar2/).

JACS2 subject group

Figure 22: Acceptances by JACS2 subject group and educational establishment (UK-domiciled only, 2011)

The Joint Academic Coding System (JACS) is owned and maintained by the Universities and Colleges Admissions Service (UCAS) and the Higher Education Statistics Agency (HESA) and is used for subject coding of provision across higher education in the UK.

JACS was first introduced in 2002/03 (UCAS year of entry 2002 and reporting year 2002/03 HESA) to replace the two different classification systems previously used by the two organisations. JACS is currently used to code the subjects of both higher education courses and the individual modules within them across the full range of higher education provision.

JACS2 was introduced for 2007 year of entry (UCAS) and 2007/08 reporting year (HESA) and the coding is regularly reviewed to ensure best fit with the current HE offering in the UK.
